

The visit at the farm

We visited the Gonne Girls farm in Gonneville en Auge.

We visited the farm with Gaëlle.

Gaëlle explained us that the farm use regenerative agriculture :

1. They don't use chemical products, they use the chickens poo.

2. They grow trees, grass and plants to store carbon.

3. They have around one thousand chickens in 4 mobile hen houses. They can move the hen houses so the chickens always have fresh grass. We fed the chickens and collected the eggs.

4. In the green houses and the vegetable garden, they grow all sort of vegetables.
