

Creating a growing bed

First we demarcated the growing beds : we used rope to draw a rectangle. Then, we took the broadfork to loosen the soil in this rectangle.

Then, we pulled off bad weeds.

With the wheelbarrow we filled compost with the shovels.

We spread that compost on the rectangles.

And the growing bed was ready!

We did another activity as well :

Next to the growing beds, we spread the straw in 3 different areas where the farmers are going to plant vegetables.
